Confirmation of the availability of a strain for the purpose of valid publication of a new name according to the Prokaryotic Code

The following information is confidential and serves only to allow the International Journal of Systematic and Evolutionary Microbiology to confirm that a strain has been deposited and will be available from the DSMZ in accordance with the Rules of the Prokaryotic Code, ICNP (2022 revision).

Strain _____ has been deposited in the DSMZ under the number

DSM

This strain is available in the publically accessible section of the DSMZ and restrictions have not been placed on access to information concerning the presence of this strain in the DSMZ. It will be included in published and online catalogues after publication of this number by the authors. Strains collected after October 2014, may be accompanied by Nagoya Protocol documentation (e.g., PIC, MAT, MTA, or IRCC), which have been reviewed by and will be available from the DSMZ in accordance with the Rules of the Prokaryotic Code (2022 revision).

This strain has been checked for viability in the DSMZ and is stored using one of the standard methods used in the DSMZ.

The depositor of this strain has also carried out a "depositor's check" and confirmed the identity of the strain held under this DSM number.

The DSMZ is not responsible for differences between the properties of the strain deposited in the DSMZ and properties given in the literature/databases.

It is the sole responsibility of the depositor to ensure that type strains deposited in the DSMZ conform to the requirements of the appropriate Rules governing prokaryotes nomenclature and the deposition of type strains (Rules 18a, 27, & 30 of the ICNP, 2022 revision).

Dr. Stefan Spring
Curator responsible for the strain
